SUMMARY

Cybersecurity student ranked in the **top 15% globally on TryHackMe** (57+ rooms completed) with proven hands-on skills in penetration testing, web application security, and Python-based security tooling. Developed 4 open-source security tools integrating CVE databases, multi-threaded scanning, and automated threat detection. Seeking an internship to contribute offensive security expertise to a real-world security team.

TECHNICAL SKILLS

Penetration Testing	Reconnaissance, enumeration, exploitation, privilege escalation, post-exploitation
Web App Security	OWASP Top 10, SQL injection, XSS, IDOR, CSRF; Burp Suite interception & replay
Networking	TCP/IP, DNS, HTTP/S, SSH; Wireshark packet analysis; service fingerprinting
Security Tools	Nmap, Burp Suite, Metasploit, ffuf, Gobuster, Wireshark, linPEAS, Netcat
Programming	Python (scripting, automation, socket programming), Bash shell scripting
Operating Systems	Kali Linux, Ubuntu, Windows; comfortable across CLI and GUI environments
Version Control	Git, GitHub; 5+ public repositories with full documentation and README

WORK EXPERIENCE

Cybersecurity Practitioner (Self-Led)

Jan 2025 – Present

Independent Research & Lab Practice — Remote

- Solved **57+ TryHackMe rooms** across web exploitation, privilege escalation, and network forensics, earning a **global ranking in the top 15%** out of 3+ million users.
- Exploited **10+ OWASP Top 10 vulnerabilities** (SQLi, XSS, IDOR, command injection) across structured lab environments, documenting attack chains and remediation steps for each.
- Intercepted and manipulated **100+ HTTP requests** using Burp Suite, uncovering authentication bypass and parameter tampering vulnerabilities in web application labs.
- Scanned and enumerated **15+ target machines** using Nmap and Gobuster, producing structured reports of open ports, running services, and identified CVEs mapped to detected versions.
- Competed in **Chakravyuha 2.0 CTF**, solving web challenges involving JavaScript credential extraction, Burp Suite traffic analysis, and steganographic image analysis under time pressure.
- Collaborated with online security communities to share writeups, receiving **positive peer feedback** on documentation clarity and technical depth across 3 published challenge solutions.

PROJECTS

C2 Chat App

itemize

Architected a **multi-threaded TCP chat server** demonstrating 8 secure vs. vulnerable coding patterns (subprocess vs. `os.system`, input sanitisation, whitelisted command execution).

Built a **real-time threat detection engine** with 15 regex rules flagging injection and escalation attempts; integrated IP banning, operator console, and session-level audit logging.

Authored a **38-unit test suite** covering threat detection, access control edge cases, and concurrent connection handling; achieved **100% pass rate** on all regression tests.

Python Vulnerability Scanner

itemize

Engineered a **CLI vulnerability scanner** that correlates discovered services against the NVD API, surfacing active CVEs with CVSS scores for **200+ service-version combinations**.

Reduced manual reconnaissance time by **60%** in lab environments by automating TCP/UDP port scanning, banner grabbing, and structured JSON/CSV report generation.

Multi-Threaded Port Scanner

itemize

Designed a configurable port scanner covering **65,535 ports** with thread-pool parallelism, cutting scan time by **75%** relative to sequential baseline and supporting export to CSV/JSON.

CERTIFICATIONS

NativeSOC Fundamentals — SOC operations, threat detection and incident response 2025
Advent of Cyber 2025 — TryHackMe; 25-day challenge (web, forensics, network, OSINT) 2025
Dark Web Monitoring — HaxCamp by HaxSecurity; dark web threat intelligence, OSINT-based monitoring, and exposure analysis (Cert ID: 1648) & Sep 2025 \

EDUCATION

B.Tech in Electronics & Communication Engineering Aug 2022 – Jun 2026
Maulana Abul Kalam Azad University of Technology (MAKAUT) — Kolkata, India

- Specialisation in cybersecurity engineering; relevant coursework: Network Fundamentals, Digital Systems, Signals & Systems, VLSI Design, Control Systems.
- Participated in **Smart India Hackathon** and **Nexus** collegiate events; preparing Scopus-indexed cybersecurity research paper (target: Q3 2025 submission).
