SUMMARY

Cybersecurity enthusiast with 2+ years of hands-on offensive security experience built through labs, CTFs, and open-source tooling (Nov 2023 – present), currently working as a Solutions Engineer (Pre-Sales). Skilled in penetration testing and vendor security stacks (**Kaspersky**, **Acronis**), with practical exposure to SOC/SIEM environments. Ranked top 15% globally on **TryHackMe** (57+ rooms) and built AI-augmented tooling that pairs CVE/NVD data with LLM-driven analysis and reporting.

EDUCATION

B.Tech in Electronics & Communication Engineering

Aug 2027

Maulana Abul Kalam Azad University of Technology (MAKAUT) – Kolkata, India

- Relevant coursework: Network Security, Network Fundamentals, Cryptography
- Participated in Smart India Hackathon (SIH), Bharatiya Antariksh (ISRO) Hackathon

SKILLS

- **Penetration Testing:** Reconnaissance, enumeration, exploitation, privilege escalation, post-exploitation
- **Web App Security:** OWASP Top 10, SQLi, XSS, IDOR, CSRF
- **Tools:** Nmap, Burp Suite, Metasploit, ffuf, Gobuster, Wireshark, linPEAS, Netcat
- **Vendor Stacks:** Kaspersky (EDR Optimum, KUMA SIEM, KATA NDR), Acronis, Safetica, GTB
- **Networking:** TCP/IP, DNS, HTTP/S, packet analysis, service fingerprinting
- **Programming:** Python, C/C++, JS, PHP, Bash
- **AI/LLM:** Claude, Groq LLM, ChatGPT; AI-assisted threat analysis
- **OS:** Kali Linux, Ubuntu, Parrot OS, Windows

EXPERIENCE

Solutions Engineer (Pre-Sales)

July 2026 – Present

SEA Infonet Pvt. Ltd.

Kolkata, India

- Delivered 10+ product demos and supported 2 end-to-end POCs for **Kaspersky (EDR Optimum, KUMA SIEM, KATA NDR)** and **Acronis (backup, replication, DR, EDR)** to prospective enterprise clients
- Configured **Kaspersky Security Center (KSC)** in isolated test environments and validated detection against 6 live malware samples, derisking client technical evaluations
- Contributed to 2 **SOC RFP gap analyses** across **NG-SIEM/SOAR/UEBA/NBAD** requirements, identifying architecture gaps in vendor product stacks
- Built cross-vendor pre-sales knowledge spanning **Kaspersky, Acronis, Safetica, and GTB** to support solution positioning against competitors

PROJECTS

Python Vulnerability Scanner – NVD/CVE Integration, Groq LLM.

- **Learned:** Correlating banner-grabbed service/version data against the **NVD API** for **CVSS**-scored CVE matching, then auto-generating triage reports via **LLM**
- **Challenge:** Version-fingerprinting across 200+ services returned noisy, unprioritized CVE matches – too much to triage manually

- **Overcame it:** Engineered an **NVD**-integrated scanner with **LLM**-driven report generation, resolving noisy **CVSS** matches across 200+ services and cutting recon time by 60%

Port Scanner – Python.

- **Learned:** Applied **thread-pool parallelism** and concurrent socket-level **TCP** connect scans to make full-range scanning practical, working around Python's I/O-bound blocking calls
- **Challenge:** Single-threaded, blocking socket connections across 65,535 ports created an I/O-bound bottleneck unsuitable for time-boxed engagements
- **Overcame it:** Thread-pooled concurrent scanning with connection timeout tuning, reducing full-port-range scan time by 75%

URL Analyzer – Python.

- **Learned:** Parsing URL structure (scheme, domain, subdomains, port) and flagging dangerous schemes (**ftp://**, **file://**) and **SSRF** risk patterns like localhost/internal-IP targeting, enriched with **IPInfo API** ISP/geo lookups
- **Challenge:** Malformed or broken URLs and missing/invalid API tokens caused the tool to crash mid-analysis, breaking the workflow for users without API keys
- **Overcame it:** Built graceful input validation and a fallback path that skips IP-info enrichment on missing tokens while still completing the rest of the URL analysis

CERTIFICATIONS

- **NativeSOC Fundamentals** – SOC Operations, Threat Detection, Network Security
- **Advent of Cyber 2025** – TryHackMe: Web Exploitation, Forensics, Networking, OSINT
- **Dark Web Monitoring** – Dark Web Threat Intelligence, OSINT, Exposure Analysis
